 14. Management Reports
 15. Staff Management & Audit Log
 16. Settings, Telegram Summary & Offline Mode
 17. Daily Routine Checklists
 18. Troubleshooting & FAQ
-

1. Getting Started — Login & Roles

Open the app on your tablet or phone. Each staff member signs in with their **Name** and **Password**.

How to log in

- 1 Enter your staff **Name** and **Password**.
- 2 If you are a cashier, enter your **Starting Cash** (the money already in the drawer). This is required.
- 3 Tap **Login**. Your shift starts automatically.

Roles

Role	What they can do
Cashier / Staff	Take orders, run the register, mark items prepared/ready/delivered, clock in/out, change own password.
Superadmin (Manager/Owner)	Everything above PLUS inventory, menu setup, pricing, accounting, all reports, user management, voids, refunds, the QR open/close switch, and product availability (86).

NOTE: If a screen shows a "Superadmin Only" lock, that feature is restricted to managers. Ask a manager to log in.

2. Starting & Ending a Shift (Cash Drawer)

A **shift** tracks the cash in your register from login to logout, so you can reconcile the drawer at the end.

Start of shift

- Your shift begins at login when you enter your Starting Cash.

End of shift (cash count)

- 1 Tap **End Shift** in the sidebar (or the red End Shift button on mobile).
- 2 Count your drawer using the **bill & coin grid** — enter how many of each denomination (P1000, P500, ... coins). The total adds up automatically. (You can also type a total directly.)
- 3 Tap **Submit Count**. The system shows Expected vs Actual and the **variance** (over/short).
- 4 Optionally record a **Bank Deposit** for the cash you are dropping.
- 5 Tap to finish — you are logged out.

IMPORTANT: A negative variance means the drawer is short. Report large shortages to your manager before leaving.

3. Clocking In, Breaks & Clocking Out

The time clock records your work hours for payroll, separately from the cash shift.

Clock in

- Tap **Clock In** in the sidebar. The button then shows "Clocked In · (minutes)".

Taking a break

- 1 Tap the **Clocked In** button. A choice appears: **Take a Break** or **End Shift**.
- 2 Tap **Take a Break**. The button changes to "On Break — tap to resume".
- 3 When you return, tap the button again to **resume work**.

IMPORTANT: Each staff member gets up to **1 hour of break** per shift. Once the hour is used up, the "Take a Break" option is disabled and you can only End Shift.

Clock out

- Tap the **Clocked In** button, then **End Shift (Clock Out)**.
- The system records your **worked time** (total minus breaks). Managers see this under History > Staff Hours.

4. Taking Orders at the Register (POS)

Open the register

- On the Orders & POS tab, tap **Manual Order** to open the register.

Build the order

- 1 Tap products to add them. Use the **search bar** or category chips to find items fast.
- 2 If a product needs choices (size, milk, etc.), a popup appears — make the required selections, then **Add to Cart**.
- 3 Set the **order type**: Dine-In, Takeout, Pickup, Manual Delivery, Grab, or Foodpanda.
- 4 Enter the **Customer/Driver name**. For Pickup/Delivery, enter phone (and address for delivery).
- 5 Adjust quantities in the cart with + / -. Add **Special Instructions** and **Guests** if needed.
- 6 Tap **Place Order**. The order is sent to the board as **Pending**.

NOTE: Payment is NOT taken at the register anymore. Orders are placed first, then **checked out (paid) from the Orders board (All view)** when completed — see Section 9.

TIP: Items show an **86** or **Out** badge and cannot be added when a manager has disabled them or their ingredients are out of stock.

5. Combos, Modifiers & Add-ons

Combos / Promos

- Combos (e.g. "Budget Meal: Americano + Pandesal") appear in a **Combos & Promos** strip at the top of the register and on the customer menu.
- Tap a combo to add it as one line at the bundle price. The kitchen ticket lists the components, and stock is deducted for each.

Required modifier groups

- Some products require a choice — e.g. "Choose your milk: Full Cream / Oat / Soy".
- You cannot add the item to the cart until every **required** choice is made.

Optional add-ons

- Tick any optional add-ons (extra shot, syrup). Their price and ingredients are included automatically.

6. Parking & Resuming Tabs

Parking holds an unfinished order (an "open tab") without sending it to the kitchen — useful when a customer is still deciding or will order more.

Park an order

- 1 Build the order in the register.
- 2 Tap **Park** (next to Place Order).
- 3 The order is saved and the board jumps to the **Parked** view so you can see it.

Find & resume parked tabs

- 1 On the Orders board, open the status filter (the button showing "All") and choose **Parked** — it shows a count badge.
- 2 Find the tab and tap **Resume**. It loads back into the register so you can add items and Place the order.

NOTE: Parked tabs never appear in the kitchen queue. They are cleared automatically at midnight close if left unresolved.

7. Customer QR Self-Ordering

Dine-in customers can scan a table QR code and order from their own phone.

Generate a table QR

- Tap **Show QR** in the sidebar (or QR on mobile). Show or print it for the table. Tap **Generate Next QR** for the next table.

What the customer does

- Scans the QR, enters their name, browses the menu (only available items show), picks options, and sends the order to the kitchen.
- They can add Special Instructions and watch their order status (Preparing / Ready) live on their phone.

NOTE: If the kitchen is closed, a manager can switch **QR Orders: CLOSED** (Section 16). Customers then see "Kitchen is currently closed" and the staff register keeps working.

8. The Orders Board — Kitchen, Bar & Checkout

The Orders & POS tab shows all active orders as cards. Use the **Kitchen / Bar / All** view buttons and the status filter to focus.

Order statuses

Status	Meaning
Pending	Newly placed, not yet started.
Preparing	Being made.
Ready	Done, waiting for pickup/serve.
Partially Delivered	Some items handed over, more coming.
Completed	Finished and paid.
Parked	Held tab, not in the kitchen queue.

Working an order

- Per-item buttons move each item: **Prep -> Finish -> Deliver**. When all items are done the card turns green with an **All Done** badge.
- Tap the **chef-hat icon** to print a kitchen ticket (no prices). Tap the **printer icon** for a full receipt.
- The **Active Tables** strip shows which tables have live orders — tap a chip to filter that table.

TIP: To find an old order, use the search box (name / order # / table). For past days use the History tab archive search with date range.

9. Payments, Split Tender, Voids & Refunds

Checkout (taking payment)

- 1 On the order card (All view), mark the order toward **Complete**.
- 2 Choose the **payment method** (Cash, GCash, Maya, Bank, etc.) and enter cash tendered for change.
- 3 Confirm — the sale is recorded and the receipt can print.

NOTE: Only **Cash** goes into the drawer immediately. GCash, Maya, bank and delivery-partner payments are booked as **Accounts Receivable** until the money is verified and settled (Section 13).

Split payment

- At checkout, use Split Pay to record more than one method (e.g. P100 cash + remainder GCash). The amounts must add up to the total.

Void vs Refund (managers)

Action	When to use
Void	The sale should not have happened (mistake). Reverses the sale; choose Restock (food not made) or Spoilage (food made/wasted).
Refund	A genuine return — the sale happened, the customer got money back. Records a reversal entry; supports partial refunds.

10. Inventory & Stock Control

Managed under the Inventory & Stock tab. Stock is stored precisely but always shown to you in **kg, L, or pcs**.

Receiving stock (Procurement)

- 1** Fill the Procurement form: item name, quantity + unit, unit cost, optional expiry & low-stock threshold.
- 2** Choose **Paid From**: Cash on Hand, Cash in Bank, or Accounts Payable (buy on credit).
- 3** Tap **Add to Stock**. Existing items are restocked (weighted-average cost); new items are created.

Expiry (FEFO) & Waste

- Items can carry expiry batches; the soonest-expiring stock is used first. The Expiry Watch panel and sidebar badge flag items expiring or expired.
- Use **Waste** to log spoilage with a reason — it deducts stock and records the loss.

Bulk Excel import & counts

- Use **Import** to upload a stock-take spreadsheet (Code, Product, Qty Unit, Unit Cost, Expiry). A preview shows increases/decreases before you confirm.
- Use the **EOD count** to enter physical counts (in kg/L/pcs); variances are recorded.

11. Menu Setup — Products, Pricing & Availability

Managers use the menu setup and Pricing Control tabs.

Products

- Create products with name, category, base price, sizes, recipe (links ingredients for stock + COGS), and a photo (upload or paste an image URL).
- Attach **Modifier Groups** and create them in the panel below product creation.
- Build **Combos** in the Product Promos panel — pick component products and set the bundle price.

Pricing & availability

- Pricing Control shows each product with selling price, recipe cost, and gross margin %. Tap a price to edit inline.
- Toggle **ON/OFF (86)** to instantly hide a product from the menu and register (e.g. ran out). Out-of-stock items hide automatically.

12. Daily History, X-Reading & Z-Reading

Under Daily History & Shifts.

Readings

Report	What it is
X-Reading	A mid-shift snapshot of sales so far. Does NOT close the register.
Z-Reading	The official end-of-day report (PDF): net sales, payment-method breakdown, voids/cancels. Amounts in PHP with parentheses for negatives.

Shift History

- Lists every shift with opening cash, cash sales, expected, actual and variance.
- Your **current open shift** appears highlighted with a **LIVE** tag showing running cash sales.
- A Staff Hours sub-tab shows clock-in/out records and worked durations.

13. Accounting & Financial Reports

The Accounting & Ledger tab (managers). The business is **Non-VAT** — no VAT or BIR forms are produced.

Section	Use
Journal	Every double-entry transaction; export to CSV.
Profit & Loss	Revenue, COGS, expenses, gross/net profit for a date range. Export to PDF .
Balance Sheet	Assets, liabilities, equity with a balanced check.
A/R Outstanding	Non-cash sales (GCash/bank/delivery) awaiting settlement; tap Settle when paid.
A/P Payables	What you owe suppliers (buy-on-credit); record supplier payments.
By Payment	Sales split by payment channel for daily reconciliation.
Add Expense	Record an operating expense (rent, utilities, etc.).
Revolving Funds	Petty cash float — disburse and replenish.

14. Management Reports

Report	What it tells you
Profit by Category	Revenue, estimated COGS and margin % per menu category.
Menu Engineering	Classifies items as Stars / Plowhorses / Puzzles / Dogs (sales volume vs margin) so you know what to promote, reprice or cut.
Cashier Variance	Average drawer over/short per cashier across shifts — spots training or honesty issues.
Purchase Order	Suggested reorder quantities (to cover ~7 days from recent usage) and low-stock items; export a PDF in Product / Qty Unit format.

NOTE: Combo sales are split across their component products in the Profit-by-Category and Menu-Engineering reports.

15. Staff Management & Audit Log

- **Users** (managers): add staff, set role, reset passwords, remove accounts.
- **Change Password** (everyone): in the sidebar — requires your current password.
- **Audit Log** (managers, Audit tab): records price changes, 86 toggles, password changes, refunds, A/P payments — who did what and when.
- **Staff Hours**: worked time from the clock, including breaks.

16. Settings, Telegram Summary & Offline Mode

QR Orders open/closed

- Managers can toggle **QR Orders: OPEN/CLOSED** in the sidebar to stop accepting customer QR orders after hours. The staff register is unaffected.

Daily Telegram summary

- If configured by your installer, a daily sales summary is sent to the owner's Telegram automatically after midnight close.

Install as an app & offline

- Use **Install App** (sidebar) to add the POS to the device home screen, where supported.
- If the internet drops, the register keeps taking orders — they are **queued** and sync automatically when the connection returns. A banner shows offline / syncing status.

NOTE: Install-to-home-screen and offline app caching require the app to be served over HTTPS (or opened on the device itself). Order-queue resilience still works either way. Ask your installer if unsure.

17. Daily Routine Checklists

Opening

- Log in with Starting Cash.
- Clock in.
- Check the Inventory low-stock / expiry badge; restock if needed.
- Confirm QR Orders are OPEN (if you offer QR).

During service

- Take orders -> Place Order -> work them on the board -> Complete & take payment.
- 86 any item that runs out.
- Park tabs for undecided customers.

Closing

- Settle any A/R that was paid.
- Print X-Reading to review, then End Shift and count the drawer.
- Print the Z-Reading for the day.
- Clock out.
- Switch QR Orders to CLOSED if applicable.

18. Troubleshooting & FAQ

Problem	What to do
A product is missing from the menu	It is 86'd or out of stock. A manager can re-enable it in Pricing Control, or restock its ingredients.
Cannot add an item to cart	A required choice (e.g. milk) is not selected, or the item is unavailable.
Cannot take another break	The 1-hour break limit is used up for this shift.
Customer QR says "kitchen closed"	A manager has set QR Orders to CLOSED. Switch it back to OPEN.
Parked order disappeared	Parked tabs are cleared at midnight close. Re-ring it.
"Insecure connection" PDF warning	Harmless on your local network. It only disappears under HTTPS.
Drawer is short at end of shift	Recount using the denomination grid; report large variances to a manager.

End of handbook. Keep this guide near the register for new staff.
